UNIT-I

VALUE EDUCATION:

Value education is an important aspect of education that focuses on developing moral and ethical values in students. It aims to help students understand and appreciate the importance of honesty, responsibility, respect, compassion and other values which are essential to lead a fulfilling and meaningful life.

Value education is the process of developing essential values and morals in individuals in order to help them to develop a strong character and become a responsible members of society. Value education involved teaching fundamental principles such as respect, honesty, empathy responsibility, compassion and integrity etc. which are important for a person's personal and professional development.

OBJECTIVES OF VALUE EDUCATION:

The main objective of value education is to create a better society by cultivating values in individuals. Some of the key objectives of value education are:

1. Instilling values: The primary objective of value education is to instill essential values in individuals such as honesty, integrity, respect, empathy, responsibility

2. To build Character: The goal of value education is to help people build strong characters based on moral principles and become responsible citizen

3. Fostering Critical thinking: Value education helps people to think critically and reflect on their actions and beliefs, which help them to take better decisions and solve problem in constructive way.

4 To promote Social harmony: Value education aims to promote social harmony by developing respect for diversity, it develops empathy which encourage individuals to work for developing a better society

5 Encourage positive behavior: Value education aims to cultivate positive behaviour by promoting ethical principles such as honesty, responsibility and empathy.

6. To enhance personal growth: Value education aims to assist people in achieving personal growth and development by inculcating in them a sense of self awareness, self esteem.

Purpose of Education :

1. Create a meaningful Life : Enjoyment, power, social care / love, survival, personal satisfaction, fulfillment; worthy use of leisure, foster curiosity and innovation to fulfill peoples dreams and aspirations.

2. Good citizenship : Thoughtfull, humane, responsible, moral, caring & ethical

3. Economic welfare : Prepare for a vocation, life training college, productive work force. To be successfully employed to earn a living and be a consumer To maintain a healthy market economy.

4. To be Spiritual : Religious, and understanding basic concepts of life.

5. Learn the fundamentals or become literate : To be able, to read, write, orate, calculate, to be mathematical, spatial

6. Develop Physically : To develop body and physical skill development, physical education to remain physically healthy, to develop art drama, music

7. Become Social: for the well being of each individual within society, to develop intrapersonal and interpersonal relationship, human relationship, social skills, to inculcate proper social behaviour, to remake or maintain the social order to sustain life on Earth.

8. Critical thinker and problem solving: To train how to inquire, how to think - not what to think, from where to get information, how to analyze, how to create alternative solutions, how to communicate.

9. Develop into a life long learner: Purpose of education is to develop the will, skill and desire to be a lifelong learner,

10. Worker bees: Train the young minds - to be peaceful obedient drones.

11. To have more citizens, educators: To maintain a social or educational system to prepare more educators or teachers to sustain the good life

12. To create a better way of Living: Purpose of education is to make you understand yourself, self-efficacy, sense of well being, healthy life style which brings weath & harmony with nature.

Need of Value Education:

Value education helps everyone in improving the value system that they hold and implement in their lives. Everyone has to uphold various types of values in their life like cultural values, universal values, personal values and social values.

Value education is required to shape one's life & to give them opportunity to perform on global stage. The need of value education is increasing among the parents, children, teachers etc., as we witness many cases of violence, behavioral disorder, lack of unity in society etc.

Technology can only help us to achieve which is considered 'Valuable' in an effective and efficient manner but it cannot help us to decide "What is valuable". Without this decision, technology is aimless and directionless. It can be used for destructive purposes also. Hence it is necessary to imbibe values in student so that they can develop their own moral codes which will help them to become a better human being. Value means importance and education means knowledge, therefore value education is knowledge of importance

The value education need could be understand by deviding the human life in view of following four parts:

1. Personal Needs.
2. Fundamental Needs.
3. Social Needs.
4. Family Needs

Personal Needs: Today everybody wants more and more & their urges are ~~ne~~ never satisfied. Media has tremendous effect on young minds. and they are swayed away by the half truth of the advertising. They need holistic vision of the things for which the value system could be helpful.

Fundamental Needs: Value education helps to develop core human values in youngsters which enables them to have a holistic view of life and its significance. The focus is on developing the fundamental principles of equality, non-discrimination, universal peace, justice, non-violence and tolerance. So value education help people to implement fundamental values in their ~~lif~~ lives.

Social Needs: This is the era of globalization which is breaking the boundaries of nation, community caste, religion etc. The voice of different social groups are being heard nowadays. The value education helps humanbeings to fight for their social needs after understanding their duties as well as their rights.

Family Needs: Family is the first source to inculcate values in youngsters in our society. Due to the changing roles of our parents it is not very easy these days to impart relvant values in youngsters. Hence the requirement of value education has increased in the recent times. Value education enables young minds to understand their needs & help them visualize their goals correctly.

Complementarity of Values & Skills:

To fulfill our aspirations both values and skills are required equally.

To identify and set the right goals and proceed in the right direction is known as the Value Domain or the Domain of Wisdom.

To learn and practice and develop techniques to actualize our goals is known as Domain of Wisdom.

Hence, Values and skills go hand in hand and their is an essential complementarity between them.

For example, If a person wants to live a happy and peaceful life with his family. This decision making is his value domain/ Domain of wisdom. Then he will develop a skill to handle all the problems, ups and downs in the family. This skill development is his domain of skills. Both value domain and domain of skills are equally important to attain the goal of peaceful life. This is known as Complementarity of values and skills.

How current education system falls short !!

The current education system often falls short by prioritizing rote memorization over critical thinking, neglecting practical skills, and struggling to adapt to the demands of the digital age. It leaves students ill-prepared for future careers in the rapidly changing world.

Following are the key areas where the current education system falls short:

1. Emphasis on Rote Memorization and Standardized Testing:

The focus on exams and memorization can suppress the creativity and critical thinking, leading to students who can regurgitate information but lack genuine understanding.

Solution:

The focus should be shifted to deeper learning, problem-solving, and real-world application of knowledge.

2. Lack of Practical and Real-World Skills:

Our education system lack practical and real-world skills training, leaving students unprepared. Life skills like financial literacy, emotional intelligence, and communication are often overlooked in the curriculum. Students may not be equipped with the necessary skills for future careers, leading to unemployment or underemployment

3. Widening Educational Divide: There is a growing disparity between the educational opportunities available to students from privileged backgrounds and those from marginalized communities. This gap can lead to inequitable outcomes in terms of access to quality education, resources, and opportunities.

4. Inadequate Resources and Infrastructure:
Many schools, particularly in rural areas, lack adequate funding for infrastructure, teaching materials, and technology, hindering the quality of education. This can create an uneven playing fields for students, impacting their learning outcomes

5. Shortage of High-Quality Teachers:
A shortage of qualified and well-trained teachers can negatively impact the quality of instruction and student ~~learing~~ learning. This can be exacerbated by factors like low teacher salaries and a lack of professional development opportunities.

6. Focus on Job Acquisition over Holistic Development:
The system often prioritizes getting a job or passing exams over fostering creativity, critical thinking, and a love of learning. This can lead to students feeling stressed and disengaged, ultimately hindering their overall development.

7. Lack of Innovation and Adaptability:

The curriculum may not keep pace with the rapidly changing demands of the job market, making students less adaptable and competitive in the future. This can lead to graduates struggling to find employment or to remain relevant in their careers

Peer Pressure :

Peer pressure refers to the influence exerted by members of a social group on others to conform to certain behaviors, values, or beliefs. This influence can be positive, encouraging healthy choices, or negative, ~~lea~~ leading to risky or harmful behaviors. The desire to fit in and be accepted by a peer group is a key driver of peer pressure

Reasons of Peer Pressure:

1. Social Influence:
   Peer pressure arises from the influence of peers, individuals within the same social group, on each other.

2. Conformity:
   It often involves a pressure to conform to group norms, behaviours or values ~~of~~ to gain acceptance or avoid being excluded.

∴ Although peer pressure is often associated with negative influences like substance use or risky behaviors, peer pressure can also be positive, encouraging healthy behaviors or academic achievment.

for example, peer pressure can manifest in various ways, such as choosing clothing styles, adopting attitudes, engaging in risky behaviours like drinking or even academic decisions.

Impact of Peer Pressure: Peer pressure causes significant impact on individual's beliefs, values, and behaviors, particularly during adolescence when social acceptance is highly desired.

Understanding and Resisting Peer Pressure:

1. Awareness:
   We are required to recognize the pressure before getting affected and must understand it's potential impact on us.
2. Self Assertiveness:
   Individuals can resist peer pressure by expressing their own values, beliefs and desires and communicating their boundaries
3. Positive Role Models:
   Having positive role models within and outside the peer groups can help to resist peer pressure.
4. Seeking support:
   Talking to trusted adults, friends, or counselors can provide guidance and support in steering through peer pressure situations.
